Kickmaker unveils industrial Breakthroughs at CES 2025

Boston – January 2025

Kickmaker, the renowned industrialization partner for cutting-edge hardware solutions, is thrilled to announce its presence at CES 2025 in Las Vegas. This year, the company will showcase a range of products it has successfully industrialized, alongside its latest innovation: a groundbreaking cobotic solution designed to automate small and medium-sized production lines effortlessly and without the need for coding expertise.

As a leader of hardware innovation, Kickmaker has built a strong reputation by helping businesses turn visionary ideas into tangible, scalable products. At CES 2025, attendees will have the opportunity to see first-hand the impact of these industrialized products across various sectors.

The centerpiece of Kickmaker's presentation will be the reveal of its new cobotic solution. This innovative system empowers manufacturers to enhance productivity, flexibility, and efficiency while maintaining user-friendly simplicity.

“CES 2025 is the ideal platform to share the culmination of our efforts in industrial innovation,” said Eric Elmlas, CEO of Kickmaker. “We’re particularly proud of our new cobotic solution, which has the potential to revolutionize how small and medium-sized production lines operate. Our goal is to make advanced automation accessible to everyone, enabling the industrial sector to thrive in the face of modern challenges.”

Kickmaker’s booth at CES 2025 will feature live demonstrations of the cobotic system and insights into the journey of industrializing hardware from prototype to market-ready product.

Kickmaker invites media, industry leaders, and CES attendees to visit booth 3816C – HALL LVCC – Est Hall – Level 1 Pavillon France from January 7th to discover how its solutions are shaping the future of industrial automation.

About Kickmaker

Kickmaker specializes in hardware industrialization, providing expert guidance from ideation to production. The company supports innovators and industrial leaders in building scalable, high-quality products that meet the demands of today’s rapidly evolving market.
